

If it's your first time using the projector, please follow below instructions:

- Pull off the protective film of the lens when you take the projector out of the package.
- Turn on the switch of the projector, and the homepage of the projector will be cast on the screen.
- Adjust the focus by pressing the button 5 & 6 to get a clear & sharp picture.
- Keystone function: Press button 3 & 4 to adjust the trapezoid picture if place the projector center-off.

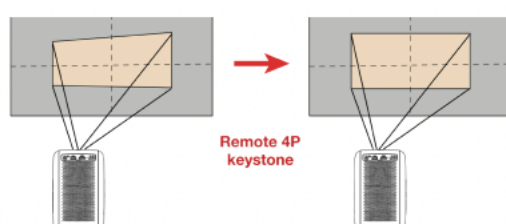

If the projector need to be placed center-off , ETOE projector provide keystone function to correct it.

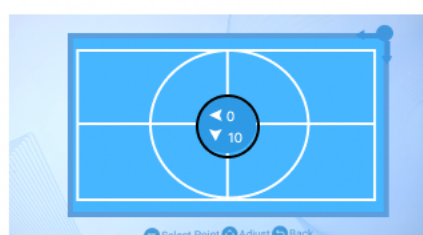

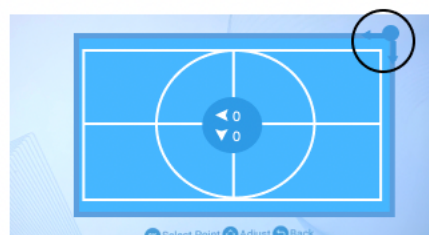

1. If place the projector toward the wall/screen, but not flatly, a projected trapezoid picture would be shown. ETOE projector will adjust the picture automatically back to a 16:9 square picture. You can also press the left & right arrow button(9&7) of the remote to adjust it manually.

2. If place the projector in a tilted angle towards the wall/screen, it will show a trapezoid picture. Use the 4-point correction function on the "Setting>Projection setting" of the homepage.

- Step 1: Press "OK" of the remote to choose the corner of the projected image that you want to correct, as showed on the image 3.1

- Step 2: Press the same arrow of the remote that showed on the screen to adjust the angle of the corner, as showed on the image 3.2

There are two wireless ways to share the screen of iPhone/iPad Macbook:

iOS AP Mirroring Mode

1. Turn on the Wi-Fi on your iPhone/iPad/Macbook and connect to the mentioned Wi-Fi on the screen;
2. Tap Screen Mirroring  on the control center of the iOS device or Macbook, and then choose ETOE_Projector model that showed on the projected screen.
3. **The Mode should be chosen firstly whenever you mirror your device through this mode.**

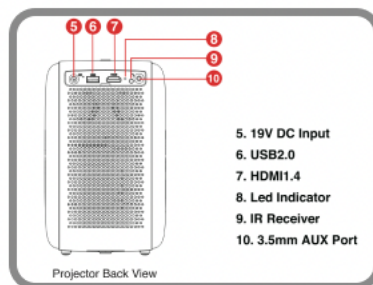

iOS Wi-Fi Mirroring Mode

1. Go back to the Home Page to "choose Settings>Network", and connect it to your Wi-Fi.
2. Turn on the Wi-Fi on your iPhone/iPad/Macbook, and connect it to the same Wi-Fi network.
3. Tap Screen Mirroring , and then choose ETOE_Projector model that showed on the projected screen.
4. **The Mode should be chosen firstly whenever you mirror your device through this mode.**

ETOE projector supports firestick connection.

Step1 : Insert the HDMI of the firestick to the HDMI port (7) of the projector ;

Step2 : ETOE projector can supply power for the firestick. Just connect the charging cable of the firestick to the USB port (6) of the projector

Frequently asked Questions

Q: I fail to use the iOS Wi-Fi Mirroring Mode with my iphone. What should I do?

A: Please check your Wi-Fi network to see if it's stable. If your Wi-Fi network is not stable, the Wi-Fi Mirroring Mode won't work well. Here's the way to fix it.

1. Try to disconnect & connect the Wi-Fi with your device and the ETOE projector.
2. Relaunch your Wi-Fi router.

Q: The projector sees the Bluetooth speaker but does not connect to it. What should I do?

A: If your Bluetooth speaker has been previously paired with several other devices, it may trouble initially pairing to the projector. Unpair the the Bluetooth speaker from all other devices and then try pairing it again with the projector.

Q: I can't watch videos on youtube with the projector with my iPhone. Is it normal?

A: The issue you have on hands of ETOE projector mainly caused by the limitation of iphone system iOS. Copyrighted content from Netflix, Hulu, and similar services CANNOT be mirrored or screencast. Please wire your laptop to the projector with a HDMI cable to enjoy content from these service.
