LC-XNB3 XGA Notebook Projector

13/06/2001

New, smaller 3-Panel XGA LCD Data/Video Projector weighs less than 9 lbs, delivers 2,000 ANSI Lumens brightness.

With a footprint similar to a legal notepad, and only about 4" thick, this go-anywhere ultra portable projector fits easily under your arm, and projects true XGA computer and video images, in 16.7 million colors, over distances up to 46' on screens up to 20' wide.

The LC-XNB3 weighs only 8.6 lbs. Yet, it delivers images with a room-filling 2,000 ANSI Lumens brightness, at a remarkable 90% uniformity and 350:1 contrast ratio, in real 1024x768 pixel resolution, with rich 3-panel LCD color.

In addition to its native XGA resolution, the LC-XNB3's smart scaling technology makes it compatible with input at SXGA, XGA, VGA, and Macintosh computer resolutions, and Normal and Widescreen video in most major standards as well.

The LC-XNB3 comes equipped-with a host of features to make set-up a breeze, including digital keystone correction, power zoom and focus, and a wireless remote control, plus an on-screen menu system, and automatic signal synchronization.

Presentation power is in the palm of your hand with the LC-XNB3, with features like computer Mouse Control, Laser Pointer, Freeze and NoShow functions, and a Digital Zoom that magnifies the image ... not the pixels ... all on the wireless remote control.

Available as an optional accessory, the PC Card Module adds computerless slide shows to the Notebook Projector. It's supplied with slide show conversion software: simply import a PowerPoint ® presentation, download it to a flash memory card, and go!

The LC-XNB3 will be available in August, 2001. Joining it at a lower price will be the 1400 ANSI Lumen LC-XNB3W. And a 1600 ANSI Lumen SVGA version, the LC-NB3W, will be available in September, 2001.
