Four, three, two, one ... et1.

A perfect landing for the most unusual projector which Toshiba HomeCinema has ever put into orbit.

The et1 not only surprises because of its snow-white UFO-look. The et1 is HomeCinema with concept: a distinctive design, an intelligent interior life, extremely simple to handle and possibilities of use which are almost unlimited. A special projector made by HomeCinema fans especially for HomeCinema fans.

Do you want to make a nail-biting experience when the Formula 1 drivers enter the chicane? Do you find the Hollywood beauty's curves more exciting? Or do you want to enjoy your absolute cinema favourites?

The et1 from Toshiba provides you with your own personal HomeCinema experience from another world. That is HomeCinema entertainment which you have never experienced before.

"That's entertainment!" The et1 turns HomeCinema into a happening.

Is the et1 from Toshiba right for you? Without a doubt: thanks to its numerous connection possibilities, the projector is able to communicate with almost all other appliances. No matter whether a DVD player, a digital camera, a games console, television set or video camera - the et1 recognises the appliances automatically ... irrespective of what you do with your HomeCinema happening with the et1. You decide where to position as the et1 guarantees

you perfect pictures even with a short projection distance of just 75 centimetres ... meaning that you can watch in small rooms without any difficulty! Should it be necessary to project your pictures from a slight inclination, you can stay completely relaxed: the keystone correction provides you with a straight picture at the push of a button.

HomeCinema with the et1 is not from this world. All the more reason why it should land at your home.

+

"And Action!" Signals on the Bridge

The et1's motto is: the more action there is, the better it is. After all, the latest member of the Toshiba family is equipped with an integrated Faroudja DCDi video-scaler™* for especially good picture quality. The videoscaler guarantees that fast cuts and picture sequences can be viewed on the screen crystal-clear - in true motion and without flickering. For the perfect show, you can choose STANDARD, MOVIE or GAME when in video mode. The et1 is both a feast for the eyes

and a joy to hear. The integrated 2 x 5 Watt loudspeakers provide you with a good sound quality. You can hear the roaring of the Formula 1 engines or the original soundtrack of your favourite film either in NORMAL STEREO or in SURROUND - depending on what you want to hear. It speaks for itself that you do not need to dispense with your subwoofer in order to hear tones which are even richer! Simply connect it to the corresponding jack on the et1.
